

## Standard Digilocks

## Digilocks

**Rating: Easy to intermediate (model depending).**

This can be **decoded without tools** and usually within 30 seconds.

**The order doesn't matter.** The gold, Codelocks one is far easier to do.

- 1) Clear the combination (C) before starting.
- 2) Tension the opening mechanism; you'll need a reasonable amount of force.
- 3) Press lightly on the buttons in turn (not hard enough to enter the number).
- 4) When a button is part of the combination, there will be less travel.
- 5) Buttons not part of the combination will be looser and travel further under light pressure.
- 6) When a button is identified as part of the combination, release tension, press the button, reapply tension and repeat as above.
