

## Supra Keybox

## Supra Keybox

Rating: Easy.

This model is designed to be attached to a fence, gate, etc. The same mechanism is present on other variations which bolt into a wall. The box construction isn't too bad (although the shackle is a bit thin) and quiet destructive attacks that give access to keys are going to be challenging. The shackle is well secured when the box is secure and is not going to be rapped open.

The technique for decoding is simple and requires no tools.

- 1) Reset to clear any depressed numbers.
- 2) Tension the opening mechanism.
- 3) Press each number in turn.
- 4) When pressing a button results in feedback through the opening mechanism, the number is part of the combination.
- 5) It is not necessary to input each number you find to be part of the combination as you go along.
